Department of Computer Science and Engineering

COURSE NAME:	Cloud Computing and Big Data Analytics – Model Practical Examination	COURSE CODE:	CSA1522
---------------------	--	---------------------	---------

Name	P. Guru
Register Number	192521010

MODEL PRACTICAL EXAMINATION – SET 2

Answer all questions. Each question carries equal marks (20).

Total marks: 100

1. Create a simple cloud software application for Car Booking Reservation System using any Cloud Service Provider to demonstrate SaaS. Include the necessary fields such as Search for Cabs, From, To, Rental, Out Station, Package Type, Hours/Days, etc.
2. Create a simple cloud software application for Hospital Information System for SIMATS Hospital using any Cloud Service Provider to demonstrate SaaS. Include the fields of Patient Name, Age, Address, Phone, Email, Attender Name, Attender Phone, Doctor Name, Diseases, etc.
3. Change the hardware compatibility of a VM (either by clone/create a new one) which is already created and configured, and run simple UNIX commands.
4. Create a Virtual Machine with 1 CPU, 2GB RAM and 15GB storage disk using a Type 2 Virtualization Software.

Q NO 1: CREATE A SIMPLE CLOUD SOFTWARE APPLICATION FOR CAR BOOKING RESERVATION SYSTEM USING ANY CLOUD SERVICE PROVIDER TO DEMONSTRATE SAAS.

AIM: To Create a simple cloud software application for Car Booking Reservation System using any Cloud Service Provider to demonstrate SaaS.

PROCEDURE:

step1: Go to zoho.com.

step 2: Log into the zoho.com.

step 3: Select one application step.

step4: Enter application name as Car Booking Reservation System.

step 5: Created new application as Car Booking Reservation System.

step 6: Select one form

step 7: The software has been created.

IMPLEMENTATION:

STEP1: GOTO ZOHO.COM

STEP 2: LOGINTOTHE ZOHO.COM

STEP 3: SELECT ONE APPLICATION

STEP 4: ENTER APPLICATION NAME

2. **Create a simple cloud software application for Hospital Information System for SIMATS Hospital using any Cloud Service Provider to demonstrate SaaS. Include the fields of Patient Name, Age, Address, Phone, Email, Attender Name, Attender Phone, Doctor Name, Diseases, etc.**

AIM:

To create a simple cloud software application for Hospital Information System for SIMATS Hospital using Zoho Creator as a Cloud Service Provider to demonstrate the Software as a Service (SaaS) model.

PROCEDURE:

Step 1: Go to zoho.com.

Step 2: Log in to your Zoho account.

Step 3: Open Zoho Creator from the Zoho applications.

Step 4: Click Create New Application.

Step 5: Enter the application name as Hospital Information System.

Step 6: Create a new application.

Step 7: Create a new form named Patient Information.

Step 9: Configure the form to store and manage patient information securely.

Step 10: Create reports to display patient details, doctor information, and treatment records.

Step 11: Save the application and test it by entering sample patient details.

Step 12: Verify that all patient information is stored correctly and the reports display the required details.

Step 13: The Hospital Information System software has been successfully created and deployed on the Zoho cloud platform.

IMPLEMENTATION:

STEP1: GOTO ZOHO.COM

STEP 2: LOGINTOTHE ZOHO.COM

STEP 3: SELECT ONE APPLICATION

STEP 4: ENTER APPLICATION NAME

STEP 5: CREATED NEW APPLICATION

STEP 6: SELECT ONE FORM

3. Change the hardware compatibility of a VM (either by clone/create a new one) which is already created and configured, and run simple UNIX commands.

Aim:

To run simple unix commands in VM workstation pro by created clone

Procedure:

STEP 1:Download VMware workstation and installed as type 2hypervisor.

STEP2:Download ubuntu or tiny OS as iso image file.

STEP 3: In VMware workstation->create new VM.

STEP 4: Do the basic configuration settings.

STEP 5: Created tiny OS virtual machine.

STEP 6: Launch the VM.

IMPEMENTATION:

4.Create a Virtual Machine with 1 CPU, 2GB RAM and 15GB storage disk using a Type 2 Virtualization Software.

Aim:

To create a Virtual Machine with 1 CPU, 2 GB RAM, and 15 GB storage disk using a Type 2 virtualization software (VMware Workstation).

Requirements:

- VMware Workstation
- Ubuntu/Linux ISO file
- Sufficient free space on the host computer

Procedure:

Step 1: Open VMware

1. Open VMware Workstation.
2. Click Create a New Virtual Machine.
3. Select Typical (Recommended).
4. Click Next.

Step 2: Select Operating System

1. Select Installer disc image file (ISO).
2. Click Browse.
3. Select your Ubuntu ISO file.
4. Click Next.

Step 3: Enter VM Information

Enter:

- Full Name: Your name
- Username: Your preferred username
- Password: Your preferred password

Click Next.

If VMware does not show this screen, you can install Ubuntu normally after creating the VM.

Step 4: Give VM Name and Location

For example:

- Virtual Machine Name: Ubuntu-15GB
- Location: Choose where you want to store the VM.

Click Next.

Step 5: Set Storage

When VMware asks for disk capacity:

- Maximum disk size: 15 GB
- Select Store virtual disk as a single file.

Click **Next**.

Step 6: Set CPU and RAM

Before finishing, click Customize Hardware.

Implementation:

Steps:

New Virtual Machine Wizard

Name the Virtual Machine

What name would you like to use for this virtual machine?

Virtual machine name:

Ubuntu-15GB

Location:

C:\Users\ADMIN\Documents\Virtual Machines\Ubuntu-15GB

Browse...

The default location can be changed at Edit > Preferences.

Cancel

New Virtual Machine Wizard

Specify Disk Capacity

How large do you want this disk to be?

The virtual machine's hard disk is stored as one or more files on the host computer's physical disk. These file(s) start small and become larger as you add applications, files, and data to your virtual machine.

Maximum disk size (GB): 15

Recommended size for Ubuntu 64-bit: 20 GB

☒ Store virtual disk as a single file

☐ Split virtual disk into multiple files

Splitting the disk makes it easier to move the virtual machine to another computer but may reduce performance with very large disks.
